Subject index of volume 12

Asynchronous distributed systems 209

Biconnected components 47
Bounded fairness 197
Bridge 47

Cache coherency 57
Caching protocols 61
Causality detection 179
Client server architecture 197
Clock synchronization 41
Commit protocols 13
Compositional correctness-preserving transformation 175
Compositional setup 105
Concurrent data object 197
Consensus problem 209
Consistent memory 75
Correctness preserving 61
Crash failures 209
CSP 91

Deadlines 13
Delayed simulation 129
Distributed algorithms 179
Distributed cache memory 75
Distributed commerce transactions 13
Distributed protocols 1
Distributed service implementation 175
Distributed systems 41, 47

Fault tolerance 197
Fault-tolerance 41, 209
Finite state machine 31
Formal design 61

Lazy caching 105
Lazy caching algorithm 151
Lazy caching protocol 91
Logical clocks 179
LOTOS 175

Memory management 197
Multifunction protocols 1

Parallel program verification 57
Process algebra 31, 61
Protocol composition 1
Protocol synthesis 175

Reactive systems 61
Refinement 129

Safety and liveness properties 1
Self-stabilization 41, 47
Sequence chart 31
Sequential consistency 57, 91, 105, 129, 151
Specification 91, 129
Synthesis 31

Temporal logic 129
TLA 151
Transduction 129
Transformations 61
Trust 13
Trusted intermediaries 13

Unreliable failure detectors 209

Verification 91, 129

Weak memory models 57
